How to Cultivate

Chrysanthemums From Seed

If you have a hothouse or frame you may sow the seed anytime, excepting hot summer months. The seeds can be sown as soon as frost is over, but not much later if you wish to see good flowers the same year. Sow the seed in pots or flats or in protected frame. Since the seeds are small care must be exercised not to wash them away. In about two or three weeks the seeds will germinate. When they are large enough to be transplanted, the seedlings should be planted in trays or outdoor and they will come to bloom the same year

Chrysanthemums

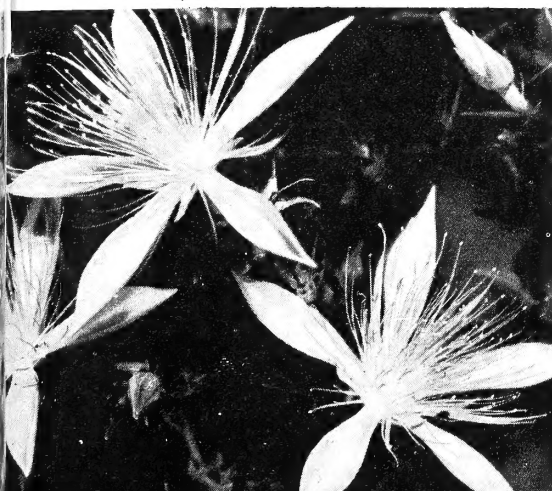

Early Flowering Double Mixed

Starts flowering already in August, mostly full double, some are semi-double and a few singles in dozens of different colors. Flowers from seed the first year often comes 3 inches across, second year from cuttings often exceeds 4 in

VAUGHAN'S ONE-SHOT FERTILIZER

YOUR BEST BUY IN LAWN FOOD TODAY!

- One Easy Spreader Application Feeds All Season
- Gives Most Nitrogen per Fertilizer Dollar
- Du Pont Uramite Prevents Burning
- Builds a Richer, Greener, Stronger Lawn

Grass requires four times as much nitrogen as other plants because it grows new leaves constantly. One-Shot was made to supply the high nitrogen requirements of your lawn whether it is Merion Blue Grass or any other grass.

COMPARE AND SAVE!

Turf experts recommend 10 lbs. of nitrogen per 2500 sq. ft. of lawn. Here's how One-Shot and the next 4 leading brands provide it:

BRAND COMPARISON	NUMBER OF APPLICATIONS	NUMBER OF BAGS NEEDED	COST PER YEAR
VAUGHAN'S ONE-SHOT Analysis: 20-5-5	Only once	Only one bag	\$8.95
BRAND "V" Analysis: 5-10-5	4 times	4 bags	\$11.00
BRAND "M" Analysis: 5-5-0	4 times	5 bags	\$11.25
BRAND "S" Analysis: 20-10-5	4 times	2 1/4 bags	\$10.69
BRAND "T" Analysis: 12-6-6	Once	2 bags	\$12.13

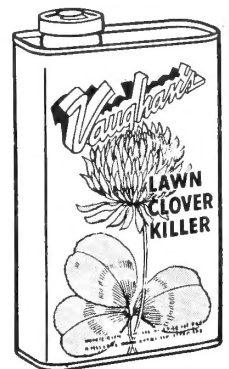

And half the nitrogen in One-Shot is from Uramite which feeds slowly by bacterial action. This prevents the burning which such heavy applications of the usual forms of nitrogen would cause. The balanced mixture

of 20% Nitrogen, 5% Phosphorous and 5% Potash is just right to promote the vigorous, healthy growth your lawn needs to look its beautiful best.

ZOYSIA LAWN from **SEED** How it grows

Plant any time early spring through early fall. Zoysia spreads by horizontal runners right at soil's surface. These runners root at every node and interweave to form a dense mat of turf. That's why zoysia can crowd out crabgrass and why it's so excellent for erosion-control planting.

The Home Garden Magazine,
Plants Out-of-the-Ordinary
by C. W. WOOD

Zoysia japonica: During the past two years I have been watching the behavior of *Zoysia japonica* in the lawn of a friend and believe that it is one strain of the Korean lawn-grass that will be found useful in many sections of the northern states. Whereas all trials of the Manila-grass, *Z. matrella*, that I have observed in the north have ended in failure, this one has persisted through two winters. It is true, of course, that the hardiest kinds turn brown during the winter, but spring revives the plants, and one soon has a green, velvety lawn. This strain, from Burnett-Seedsman, 23-25 Warren St., New York 7, New York, deserves a trial in all except the coldest sections, I believe.

It may be profitable to give a brief report of the preferred method of handling the seed. Mix a pound of seeds with 8 quarts of vermiculite, spread it out in a shallow box (a plant flat is ideal), wet down thoroughly and place in the sun. Water whenever the seed commences to dry out. As soon as the seed coats crack, broadcast over your present lawn, weeds and all, and water daily until the zoysia plants take hold. They will then take over, eliminating the old lawn grasses and weeds.

November 30, 1953

Burnett-Seedsman, Inc.,
23-25 Warren St.,
New York 7, N. Y.

Gentlemen,

You asked to let you know when our Zoysia lawn would to turn brown

Now, the end of November, it is still a perfect green. Our Zoysia lawns are the admiration of everyone - they could not be more perfect, and the \$500 I invested in Zoysia seed last Spring is far cheaper than spending \$500 for the usual hundred pounds of ordinary lawn seed and several hundred bags of fertilizer, and the labor of applying it all, every Fall, not to mention the daily Summer sprinkling of the lawns- something not needed for the Zoysia.

This much I will say-- it just is not practical to sow Zoysia seed alone to start a lawn. I would say the best plan for a new lawn is to sow it in the Fall, rather thinly, using mediocre grade of ordinary seed; let that come up-- you will have a fair quality lawn next Spring. Then that May, as soon as the ground is getting warm, go in and sow the Zoysia at the rate of 30 lbs. per acre, and rake it in, to get it down to the ground, and by August you will see it take a good hold- and by the Fall it will have driven out all the ordinary grass seed, and you will have a perfect Zoysia lawn.

Very truly yours
Joel E. Fisher

BUILD LAWNS IN POOR SOILS WITH BURNETT-SEEDSMEN'S "POORSOIL LAWNMIX"

Drouth Resistant grasses is the answer to establishing a lawn in poor, sandy soils, for the same reason that camels, not horses, are used in the desert. - So, Burnett-Seedsman have selected the best drouth grass, namely, **Creeping Red Fescue** (Illahee strain). Because of it's tolerance of drouth, Illahee is especially adapted to dry, sandy or gravelly soils—poor or rich. Illahee Creeping Red Fescue produces a deep rooted sod that withstands tramping and abuse. It spreads out, carpet-like, by means of underground rootstocks and overground stems. The grass blades are rich green, fine, smooth and soft; they stay green when other grasses brown and sear in Summer. Illahee is disease resistant; stands close cutting; grows in sun or shade and reaches full maturity in two years. It grows well with **Highland Bent**, also included in **Burnett-Seedsman's Poorsoil Lawnmix**. **Highland Bent's** growth habit somewhat parallels Illahee Fescue, especially being able to withstand adverse conditions of climate and low soil fertility. To these two permanent grasses is added a small percentage of domestic Rye Grass which acts as a nurse crop. **Burnett-Seedsman's "Poorsoil Lawnmix"** contains 75% Illahee Fescue, 10% Highland Bent and 15% domestic Rye grass, by weight.

Shady Place Lawn Grass Seed Mixture

Certain grasses, like certain flowers, revel and flourish in the shade. By including sufficient quantities of the shade loving grasses along with commodious amounts of the choicest dwarf and creeping grasses, you may be assured of a successful lawn in the shade. Remember, in shaded situation where the sun's rays do not permeate sufficiently to dry the ground, a damp and acid condition exists. It is well to add lime before sowing.

Asters (Wilt Resistant)

Need no introduction, but what is **Wilt Resistant Aster Seed**? It's a strain of seed produced from plants that were grown in heavily wilt-infested soil. Don't take chances, sow **Wilt Resistant Strain Asters** wherever possible.

BORG—KILLS TREE BORERS

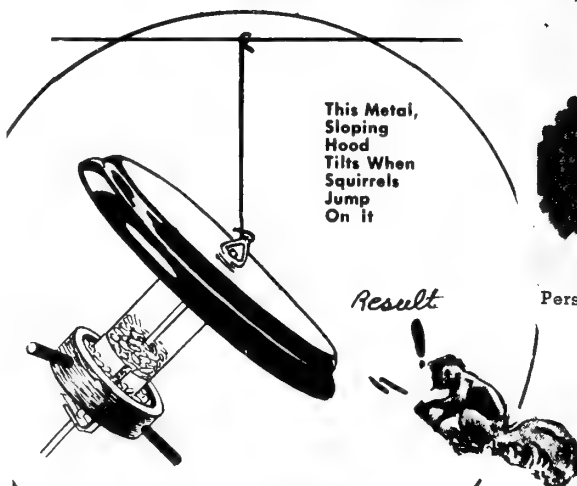

Tree boring insects have long been a problem. They have caused much disfiguring, devitalizing and killing of prized trees. But now BORO offers a positive curative method for controlling them. Not complicated to use, you simply paint BORO on the Bark of the tree or spray on limbs etc. No mixing required. Penetrates and kills all borers... in, on and under the bark to a depth of 2 1/2 inches. Effect is lasting; even kills the eggs. Usable on almost all broadleaf and evergreen trees and shrubs.

BORO is harmless to foliage and other plant tissue.

Does not cause spotting. It is safe for humans to handle. Has no odor, is clear and nonstaining... important when used near buildings. BORO's effectiveness has been proven in recognized professional landscape nurseries over a period of 7 years. Economical in use, one quart rids a 4-inch diameter tree of borers.

PARADISE (New '41)
 Here is an asparagus that actually
 comes into bearing **ONE YEAR**
EARLIER than any other variety.
 An exceptionally strong, vigorous
 producer. Some say it produces
 twice the crop of ordinary aspara-
 gus. The stalks are like Martha
 Washington in appearance, large
 and green. Just imagine, only 6 to
 8 stalks needed to make a pound.
 Its flavor is unusually mild and
 liked by all. Paradise is, rust-
 resistant.

 about 4 in. apart when 3 in. tall and

Winter Keeper. Exceptionally good keep-
 ing variety; large solid globe shaped,
 with short, thick, tapering roots of fine
 quality and flavor, retained even through
 Winter storage.

Broccoli

Easier to grow than Cauliflower.
 No other table green has captured the
 appetites of a Nation more than Broccoli,
 and why not? Its delicious fine flavor
 is appetizingly pleasing even to children,
 yet rich in iron; more easily digested
 and is of easier culture. Set plants 18
 in. apart in rows and 24 in. between;
 when the center flowers form, cut with
 about 7 in. of stem; this will be followed
 later by several smaller heads. No fuss
 in tying up, like in cauliflower.

Fifty Day Sprouting Calabrese

Just think of it—you can pick "Fifty
 Day Sprouting Broccoli" in 40 to 50 days
 after transplanting, in certain localities;
 50 to 60 in others. Seeds of this super-

 from the grower in Italy.

 yellow. Does well in any soil. Pkt., 20c; ½ lb., 60c; lb.,
 85c; 2 lbs., \$1.50; 5 lbs., \$3.50.

CONTENDER. 49 Days. An excellent 1950
 introduction of the late Dr. B. L. Wade. Undoubt-
 edly the finest early home garden bush bean and
 perhaps the best of all sorts. Resistant to common
 bean mosaic and greasy pod. Pkt., 25c; ½ lb., 60c;
 lb., 95c; 2 lbs., \$1.50; 5 lbs., \$3.50.
